

UML Sequence Diagram: Schedule Driving Lesson

UML Class Diagram

DriverPass UML Class Diagram

Technical Requirements

The DriverPass system will require a cloud-based web application that users can access from desktop and mobile browsers. The system will need a secure database to store customer accounts, appointment records, training package information, vehicle information, instructor schedules, test progress, and activity reports. The system should support secure user login, password reset, role-based access, encrypted communication, and regular backups. The system will also need internet access to update DMV-related training content and allow users to schedule or modify appointments online.
